

Title:

Joint histological evaluation of prostate specimens by the uropathologist and the clinician: We can do it better with *Epstein*

Date:

Saturday, 18 November 2017, 17.45 – 18.45

Presenter:

Jonathan I. Epstein, Baltimore (USA)

Chairs:

Rodolfo Montironi, Ancona (IT) and Antonio Lopez-Beltran, Lisbon (PT)

Aims:

The joint histological evaluation of specimens by the clinician and uropathologist can produce much more clinical and prognostic information than that contained in the final histopathology report. Both the clinician and uropathologist can benefit from such an approach. The former will more clearly understand and explain the preoperative features of the cancer, the intraoperative findings, and postoperative follow-up of the patient. The experience acquired would help improve him/her diagnostic and prognostication capabilities and surgical skill. The uropathologist will learn the great clinical significance of his/her daily routine. The course will be based on the projection and discussion of virtual slides and will focus on Epstein criteria for active surveillance and prostate cancer grading.

The course will last 1 hour.
