#### **13.05 What do we need to know and what do we need to improve in the EAU Guidelines**

#### **13.20 Clinical cases in NMIBC**

14.40 Break

#### **15.00 Clinical cases in MIBC**

**16.00 Close**

#### **Aims and objectives**

The multidisciplinary approach to bladder cancer is one of the most important factors for the improvement of the daily care of the patients.

It is not always straightforward to deal with diagnostic and therapeutic issues in bladder cancer. There are several papers showing that specialists are not commonly following the guidelines. What’s wrong? Why?

The aims of the this course is to talk to experts and interact with the audience presenting clinical cases to evaluate and challenge from basic concepts and established treatments, to new possibilities that are not always standardized and/or adopted by the EAU guidelines.

To review and update the diagnosis and management of bladder cancer

To evaluate different treatment options in bladder cancer

To challenge the daily practice
